

# WEEKLY SUBMISSION - TASK 09

POTHUGANTI CHAITHANYA - Personal Code : 10711998

Politecnico di Milano - M.Arch Sustainable Architecture & Landscape Design

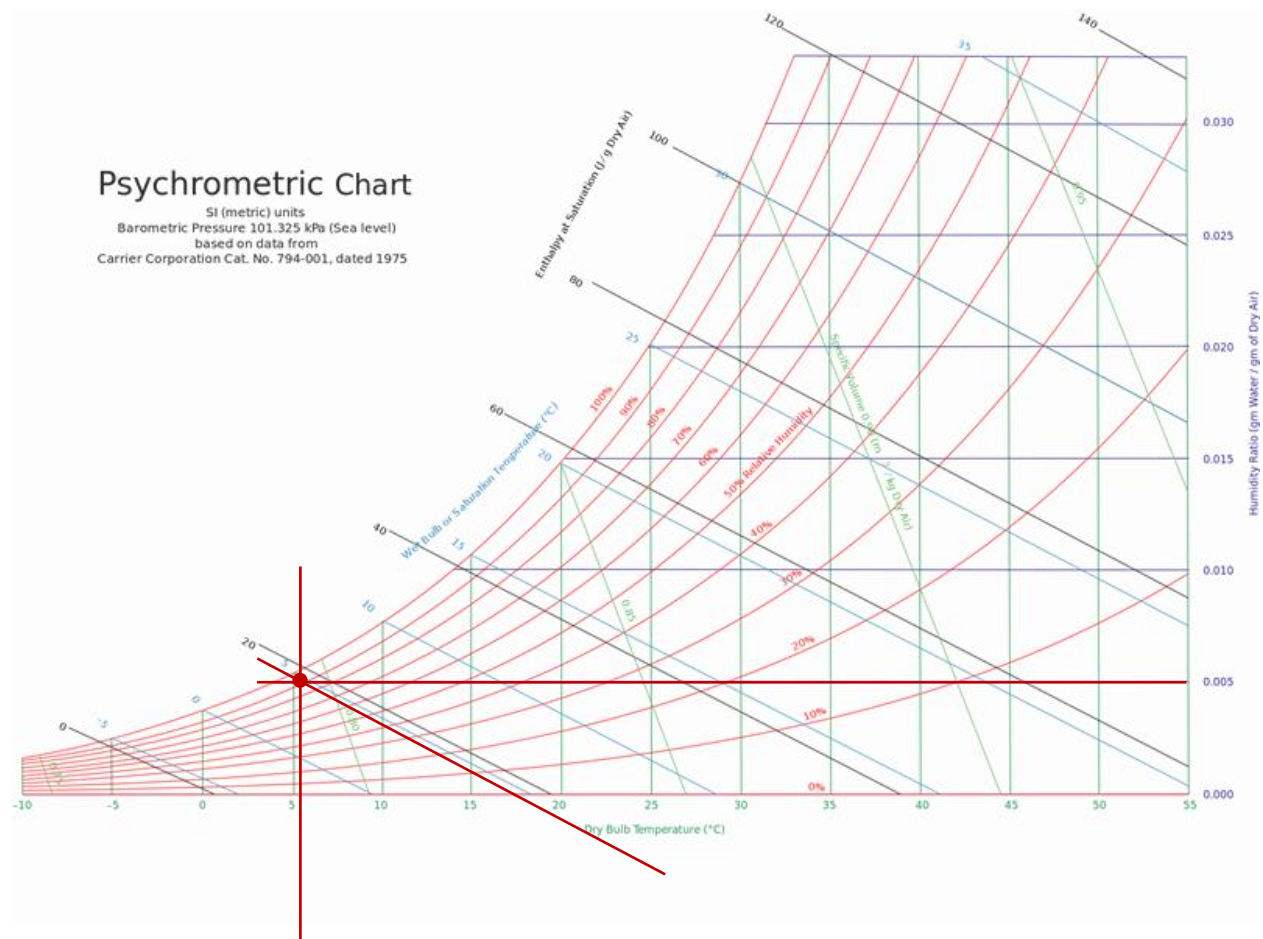

DATE : 03 DEC 2019

1) Use a weather forecast website, and utilize the psychrometric chart and the formula we went through in the class to determine the absolute humidity, the wet-bulb temperature and the mass of water vapour in the air in Classroom A (Aula A) of Piacenza campus in the moment that you are solving this exercise (provide the inputs that you utilized)

Weather Forecast Website example

Umidità: Relative humidity, Pressione atmosferica: Air total pressure (1 hPa: 0.1 kPa),  
Temperatura effettiva: temperature to be utilized.

Soln:

Date : 03 December 2019

Piacenza Weather Data:

$T_{out} = 6^{\circ}\text{C}$

Relative Humidity = 90%

Atmospheric pressure = 1017kpa

From the Graph:

Specific Humidity =  $0.005 \left( \frac{\text{gm of water}}{\text{gm of dry air}} \right)$

Wet bulb temperature = 5°C

Specific enthalpy of humid air =  $19 \left( \frac{\text{KJ}}{\text{Kg of dry air}} \right)$

$$P_v = \frac{p \cdot \omega}{0.622 + \omega} = 0.84 \text{ kg}$$

$$V_{\text{room A}} = 20 \times 6 \times 6 = 720 \text{ m}^3$$

$$m_v = \frac{p_v \cdot V}{R_v \cdot T} = \frac{0.84 \times 720}{0.4615 \times (273+6)} = 4.7 \text{ kg}$$

2) Utilize the same methodology we went through in the class and determine the sensible and latent load corresponding to internal gains, the ventilation, and the infiltration in a house with a good construction quality and with the same geometry as that of the example which is located in Brindisi, Italy.

BRINDISI, Italy														WMO#: 163200

Soln:

Number of occupants = 2

Number of bed rooms = 1

Height of the building = 2.5m

Area of the floor = 200 m<sup>2</sup>

Internal gains :

$$\begin{aligned}\dot{Q}_{\text{igsensible}} &= 136 + 2.2A_{cf} + 22N_{oc} \\ &= 136 + 2.2(200) + 22(2) \\ &= 620 \text{ W}\end{aligned}$$

$$\begin{aligned}\dot{Q}_{\text{iglatent}} &= 20 + 0.22A_{cf} + 12N_{oc} \\ &= 20 + 0.22(200) + 12(2) \\ &= 88 \text{ W}\end{aligned}$$

## INFILTRATION

A house with good construction quality,  $A_{ul} = 1.4 \frac{\text{cm}^2}{\text{m}^2}$

**Table 3 Unit Leakage Areas**

Construction	Description	$A_{ul}, \text{cm}^2/\text{m}^2$
Tight	Construction supervised by air-sealing specialist	0.7
Good	Carefully sealed construction by knowledgeable builder	1.4
Average	Typical current production housing	2.8
Leaky	Typical pre-1970 houses	5.6
Very leaky	Old houses in original condition	10.4

$$A_{es} = A_{wall} + A_{roof} = 200 + 144 = 344 \text{ m}^2$$

$$A_L = A_{es} \times A_{ul} = 344 \times 1.4 = 481.6 \text{ cm}^2$$

$$T_{\text{cooling}} = 24^\circ\text{C}$$

$$T_{\text{heating}} = 20^\circ\text{C}$$

$$\Delta T_{\text{cooling}} = 31.1^\circ\text{C} - 24^\circ\text{C} = 7.1^\circ\text{C}$$

$$\Delta T_{\text{heating}} = 20^\circ\text{C} - (-4.1)^\circ\text{C} = 24.1^\circ\text{C}$$

$$\text{DR} = 7.1^\circ\text{C}$$

$$\text{Given } IDF_{\text{heating}} = 0.073 \frac{L}{s \times \text{cm}^2}$$

$$IDF_{\text{cooling}} = 0.033 \frac{L}{s \times \text{cm}^2}$$

## INFILTRATION AIRFLOW RATE

$$Q_{i.\text{heating}} = A_L \times IDF_{\text{heating}} = 481.6 \times 0.073 = 35.15 \frac{L}{s}$$

$$Q_{i.\text{cooling}} = A_L \times IDF_{\text{cooling}} = 481.6 \times 0.033 = 15.89 \frac{L}{s}$$

## VENTILATION

$$Q_v = 0.05A_{cf} + 3.5(N_{br} + 1) = 0.05 \times 200 + 3.5(1 + 1) = 17 \frac{L}{s}$$

$$Q_{i-v.heating} = Q_{i.heating} + Q_v = 35.15 + 17 = 52.15 \frac{L}{s}$$

$$Q_{i-v.cooling} = Q_{i.cooling} + Q_v = 15.89 + 17 = 32.89 \frac{L}{s}$$

Given that

$$C_{sensible} = 1.23,$$

$$C_{latent} = 3010,$$

$$\Delta\omega_{cooling} = 0.0039$$

$$q_{inf-ventilation\ cooling\ sensible} = C_{sensible} Q_{i-v.cooling} \Delta T_{cooling} = 1.23 \times 32.89 \times 7.1 = 287.25 W$$

$$q_{inf-ventilation\ cooling\ latent} = C_{latent} Q_{i-v.cooling} \Delta\omega_{cooling} = 3010 \times 32.89 \times 0.0039 = 386.13 W$$

$$q_{inf-ventilation\ heating\ latent} = C_{sensible} Q_{i-v.heating} \Delta T_{heating} = 1.23 \times 52.15 \times 24.1 = 1546 W$$
